### **Deliverable D5.2.1**

Distribution plan for educational products

Work Package 5, 'From Science to Industry'

## **Distribution plan for educational products**

The e-learning program will be presented and demonstrated, and the Best Practice Manual and Draft Certification Program handed out to the participants of the CamCon stakeholder seminar in Copenhagen April 14<sup>th</sup> 2015.

Following this presentation, the Manual and Program will be sent as hard copies with the cover letter to all members of the distribution list below.

## From science to industry

In 2010 a research project on *Campylobacter* control in primary poultry production was launched, financially supported by the European Union's Seventh Framework Programme (FP7/2007-2013) under grant agreement no. 244547.

The project – with the acronym **CamCon** - aims to improve the control of *Campylobacter* in primary poultry production in various parts of Europe and thereby enable the production of “low-risk broilers” with respect to contamination with *Campylobacter*. It is carried out by a consortium of 10 participants from seven countries, including national diagnostic laboratories, institutions providing research and advisory services, and universities.

The project places great emphasis on ensuring rapid and effective dissemination of scientific achievements to end-users, in particular the EU poultry industry. As the project is now close to completion we are pleased to share with you some of the outcomes of the CamCon project that are targeted at the poultry industry.

Two of these – a Best Practice Manual and a Draft Certification Program – are enclosed. Biosecurity forms a central part of the procedures for *Campylobacter* prevention at poultry farms. The **Best Practice Manual** aims at highlighting and explaining these procedures in a way that can be implemented directly by the poultry industry. It is important to stress that this manual cannot stand alone, but should be integrated in existing producer guidelines and quality programs for poultry meat production. The **Draft Certification Program** should be seen as a help to quality managers and farm advisors of poultry producing companies that have intentions of introducing and documenting farm measures to reduce the risk of *Campylobacter*.

A third output from the project is a comprehensive **e-learning program** on *Campylobacter* and biosecurity that may be used by poultry producers and poultry advisors to train and educate farm staff. This tool is available at the CamCon website [www.camcon-eu.net](http://www.camcon-eu.net) where you may find other useful information from the project as well.

It is our hope that you may find these tools useful in your work with food safety in the production of poultry meat.
